DETAILED ACTION

Response to Arguments

Applicant's arguments with respect to claim 1 have been considered but are moot in view of the new ground(s) of rejection.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claims 1-3, 6-7 and 19, are rejected under 35 U.S.C. 102(e) as being anticipated by Ceresoli et al. (US Patent 6934508).

Regarding claim 1, Ceresoli et al. disclose method for determining the efficiency of publicity and/or broadcasted programs, which comprises the following steps:

a) When a TV converter or FM radio is operated, determining, either directly from the TV converter or FM radio display, or by extraction the LO frequency of the TV converter or FM radio, the frequency of the broadcast channel received at the moment (abstract);

b) Whenever required, transforming said frequency to a digital word (abstract, "current frequency setting (i.e. station identification)");

c.) When the information as the amount of watching and/or listening of a given publicity and/or broadcasted program or publicities is desired, sending a request for said information (col.3 lines 1-10, col.8 lines 57-60);

d) When said request is received, transmitting a reply which comprises the digital word corresponding to the frequency of the broadcast channel received at the moment (col.8 lines 34-35); and,

e) Processing the replies graphically whereby to determine from them the time period during which each publicity or broadcasted program is transmitted (col.8 lines 46-50).

Regarding claim 2, Ceresoli et al. disclose memorizing the digital word corresponding to the frequency of the channel which is being received (fig.8, element 822).

Regarding claim 3, Ceresoli et al. disclose constantly adjourning the memorized digital word and, when a request is received, transmitting a reply comprising the adjourned, memorized digital word (col.3 lines 1-10, col.8 lines 57-60, fig.8, element 822).

Regarding claim 6, Ceresoli et al. disclose the replies are processed analytically (col.8 lines 46-50).

Regarding claim 7, Ceresoli et al. disclose concurrently carried out for a plurality of publicities and/or broadcasted programs (fig.4a CONT., rank station audience).

Regarding claim 19, Ceresoli et al. disclose claim 1, identifying the person watching or listening to the publicities or broadcasted programs (fig.4a CONT., audience).
